

Weekly Progress Report

Name: Kamesh Kun

Week: 01

1. Activities Completed

During this week, I focused on learning the fundamentals of Java Programming. I studied the core concepts of Java, including variables, data types, operators, conditional statements, loops, arrays, methods, and object-oriented programming concepts. I also practiced writing basic Java programs and solved coding exercises to improve my understanding.

2. Milestones Achieved

- Successfully installed and configured the Java Development Kit (JDK).
- Learned Java syntax and program structure.
- Developed simple Java applications using loops and conditional statements.
- Understood the basics of classes, objects, inheritance, and polymorphism.
- Improved problem-solving skills through practical coding exercises.

3. Challenges and Hurdles

One of the challenges I faced was understanding object-oriented programming concepts, especially inheritance and polymorphism. Initially, it was difficult to understand how classes and objects interact with each other. I overcame this challenge by practicing multiple examples and referring to online tutorials and documentation.

4. Lessons Learned

Through this learning process, I gained a strong foundation in Java programming. I learned the importance of logical thinking, debugging techniques, and code organization. Working on coding exercises helped me improve my analytical and problem-solving abilities. These skills will be valuable for future software development projects.

5. Plan for Next Week

- Learn advanced object-oriented programming concepts.
- Explore exception handling and file handling in Java.
- Practice more coding problems and mini-projects.
- Improve understanding of Java Collections Framework.
